

Steelco cages and racks washer disinfector is specifically designed to support the throughput of medium and large size facilities. Focus on the environment, this machine is manufactured with energy saving system for drying and recirculation tank for water, granting the reduction of energy and water consumption.

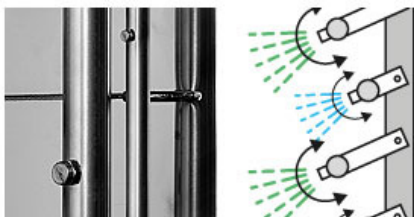

Door made in double HST tempered glass.
- Stainless steel door with glass window available as option.

Flush self cleaning filter for the re-circulation of the wash water. Optional.

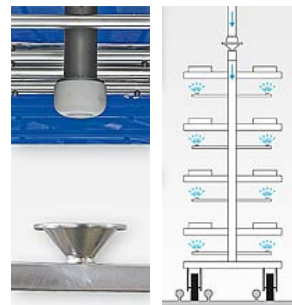

Hydrogen Peroxide vapour facility - Optional. The machine can be used as an H₂O₂ pass-through chamber to decontaminate heat-sensitive equipments.

Multiple oscillating washing and rinsing pipes with 150 washing and 100 rinsing nozzles, grant excellent process results.

The STEELCOTRONIC system enables you to optimize the washing process and to personalize the thermo disinfection programmes built into the machine. In addition it allows the user to trace the principal validated parameters according to the European rules regarding traceability of contaminated items. The control screen allows viewing of all programme phases throughout the machines function and also highlights residual time.

Patented manifold system for trolley docking with spray arms available - Optional.

Thanks to a motorized system, trolleys are automatically loaded and unloaded, with a consequent reduction of personnel need.
